SYLUTION LTD

COMPANY PROFILE 2026

AI · IoT · ELECTRONICS · ROBOTICS · DRONE · SOLAR · AGRITECH

Engineering practical systems for agriculture and real-world operations.

A concise briefing for investors, banks, government agencies, development organisations, universities and strategic partners.

KANO, NIGERIA · www.sylution.com.ng

WHO WE ARE

A technology company with a practical centre of gravity

SYLUTION applies connected engineering to problems that need to work outsid

SYLUTION LTD is a Nigerian technology innovation and engineering company. Its work combines artificial intelligence, Internet of Things, electronics, embedded systems, robotics, drone technology and solar-supported systems to create practical solutions for agriculture and other real-world operating environments.

CORE APPLICATION

AgriTech

Principal application focus

BASE

Kano

Nigeria

OPERATING MODEL

Engineering-led

Field-oriented development

CURRENT POSITION

Active engineering development, field operation, applied research and partnership preparation.

WORKING PRINCIPLE

Build from a documented problem.

Validate the system. Communicate limitations clearly.

Scale only what is ready.

ENGINEERING STACK

Six connected capabilities. One engineering foundation.

01 ARTIFICIAL INTELLIGENCE

Agricultural intelligence, computer vision, analytics and decision-support concepts.

02 INTERNET OF THINGS

Sensors, connected devices, data collection, remote monitoring and automation.

03 ELECTRONICS + EMBEDDED

Controllers, microcontrollers, circuit design, firmware and hardware integration.

04 ROBOTICS + DRONE

Automation concepts, mapping, monitoring and practical drone technology training.

05 SOLAR-SUPPORTED SYSTEMS

Solar and battery support where grid power is weak or unavailable.

06 TRAINING + CAPACITY

Practical sessions in AI, IoT, electronics, agriculture, drones and engineering skills.

SENSE → CONNECT → UNDERSTAND → ACT

A connected system begins with a signal that matters, moves useful data from the site, turns readings into clearer decisions and closes the loop with practical control.

APPLICATION FOCUS

AgriTech is where the engineering becomes useful

Modern agriculture that is measurable, connected and designed for practical operating conditions.

FROM FARM SIGNAL TO FARM ACTION

SYLUTION works across connected layers that make agricultural operations more visible and more controllable.

SMART IRRIGATION

Soil and climate sensing, controller concepts and water delivery management.

GREENHOUSE

Controlled-environment monitoring and cultivation technology concepts.

FIELD MONITORING

Agricultural observation, data capture and remote visibility.

DIGITAL RECORDS

Farm information and reporting for operators and partners.

DRIP IRRIGATION

Efficient root-zone delivery with sensor and controller integration.

SOLAR SUPPORT

Energy support for remote or power-constrained installations.

THE OPERATING QUESTION

How can a farm collect the right signal, make it useful and act on it with confidence?

SYSMART AGRO

Smart agriculture built as a connected engineering system

ACTIVE DEVELOPMENT & FIELD OPERATION

A multi-technology system for practical smart agriculture

Sysmart Agro brings together field sensing, connected control, agricultural intelligence, monitoring, cultivation technologies and irrigation management into one engineering direction.

FIELD
Conditions & context

SENSORS
Soil & climate

IoT
Controller & data

AI / DATA
Decision support

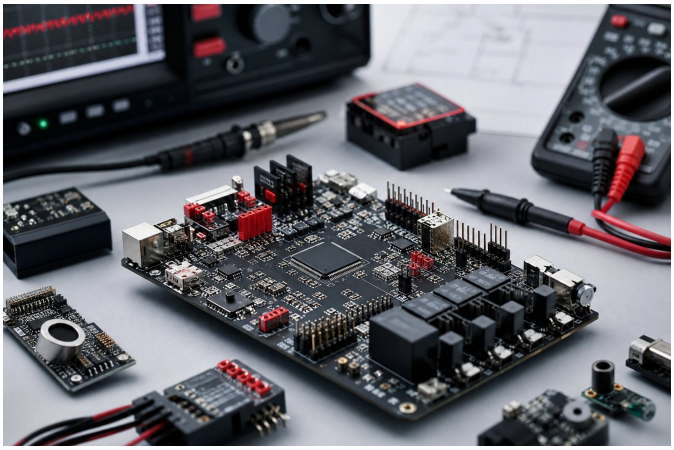

IRRIGATION
Water control

MONITORING
Dashboards & records

HOW WE BUILD

Hardware, data and disciplined testing

The technology story is a connected stack of engineering decisions - not one product image.

ELECTRONICS + EMBEDDED

Controllers, sensor interfaces, firmware, calibration and system assembly.

IoT + AGRICULTURAL INTELLIGENCE

Connected devices, remote monitoring, analytics and decision-support concepts.

ENGINEERING READINESS PIPELINE

01
DISCOVER
Challenge, users, site constraints

02
DESIGN + BUILD
Architecture, hardware, software

03
TEST + VALIDATE
Limitations, criteria, evidence

04
DEPLOY
Only when readiness is documented

CONNECTED SYSTEM ANALYSIS

FIELD → SENSORS → EDGE / IoT → DATA → AI INSIGHT → CONTROL

A practical closed loop: measure → move → interpret → act.

COLLABORATION

A platform for responsible collaboration

Built for organisations that need local engineering capability, applied research or practical field implementation.

GOVERNMENT

Smart agriculture programmes, public innovation, training and field monitoring.

DEVELOPMENT

Applied pilots, local technology development, documentation and capacity building.

RESEARCH

Universities, laboratories and applied research partnerships.

FINANCE

Evidence-led discussions around systems, pilots and operational readiness.

ENTERPRISE

Connected monitoring, electronics, automation and practical technology systems.

COMMUNITY

Training pathways for youth, women, students, farmers and agripreneurs.

PARTNERSHIP LOGIC

1. **Defined challenge**
2. **Clear scope**
3. **Evidence requirement**
4. **Responsible owner**

RESPONSIBLE TECHNOLOGY

Publish verified facts. Distinguish active projects, testing, development, planned features and commercial offerings.

Protect project data. Define access, ownership, retention, security and human oversight before deployment.

WHY ENGAGE SYLUTION

Local engineering capability with a disciplined path from problem to deployment

PRACTICAL

Field-oriented engineering, not presentation-only concepts.

CONNECTED

AI, IoT, electronics, robotics, drones and solar can work as one stack.

AGRITECH-LED

Agriculture is the principal application focus.

PARTNERSHIP-READY

Open to strategic investment, programmes, research and deployments.

ENGAGEMENT MAP

INVESTORS / FINANCE	Systems, pilots, operational readiness
GOVERNMENT / NGOs	Smart agriculture, capacity building, implementation
UNIVERSITIES / RESEARCH	Applied research, testing, validation
ENTERPRISE	Monitoring, electronics, automation, engineering systems

START WITH A REAL CHALLENGE.

Define the operating context, evidence needed and what success must look like.

Let’s build the next deployment.

A strategic conversation begins with a real challenge, a clear operating context and an honest view of what is ready.
