# 1 Executive summary

SYLUTION LTD is a Nigerian technology innovation company applying Artificial Intelligence, Internet of Things, electronics, robotics, drone technology and solar-supported systems to agriculture and other practical operating environments.

The company’s official development and engineering foundation began in 2024. Its principal application focus is agriculture, with work spanning smart agriculture, irrigation, greenhouse technology, agricultural monitoring, electronics, embedded systems and practical technology training.

SYLUTION is open to strategic investment, government and development programmes, applied research, technical partnerships and carefully selected deployment opportunities. The company communicates project status clearly and does not present concepts as commercially available unless the relevant release and evidence have been approved.

Current position

Active engineering development, field operation, applied research and partnership preparation.

### 3 What SYLUTION builds

SYLUTION works across connected technology disciplines. Capabilities may be engaged separately, or combined when a project requires a complete system.

- **Artificial Intelligence:** Agricultural intelligence, computer vision, analytics and decision-support concepts based on relevant operating data.
- **Internet of Things:** Sensors, connected devices, embedded systems, data collection and remote monitoring.
- **Electronics and Embedded Systems:** Controllers, sensors, microcontrollers, circuit design and hardware integration.
- **Robotics and Drone Technology:** Automation concepts, agricultural observation, mapping, monitoring and practical training.
- **Solar-Supported Systems:** Solar power support for IoT and agricultural installations where grid power is weak or unavailable.
- **Training and Capacity Building:** Practical sessions in IoT, AI, electronics, modern agriculture, drone technology and related engineering skills.

### 4 Sysmart Agro — flagship active project

#### ACTIVE DEVELOPMENT & FIELD OPERATION

Sysmart Agro is SYLUTION's flagship multi-technology project for practical smart agriculture. It brings together connected field management, sensing, energy support, cultivation technologies and irrigation management.

##### Drone technology

Field observation, mapping and monitoring concepts.

##### Greenhouse systems

Controlled-environment growing and monitoring concepts.

##### Solar technology

Solar-supported power for remote agricultural systems.

##### Drip irrigation

Precision water delivery and irrigation management.

**Transparency note:** Individual components may be under development, testing or planned. Demonstration interfaces should be labelled when data is simulated. The project should not be presented as commercially available without documented approval.

## 5 Government and development value

SYLUTION can engage with government agencies, public institutions, local authorities, agricultural programmes, universities and development organisations on projects that require local technology development, field data, monitoring, training or technical implementation support.

Potential collaboration areas include:

- Smart agriculture, irrigation, greenhouse and agricultural monitoring programmes.
- Technical training for farmers, youth, women, students and institutions.
- Electronics, IoT and embedded-systems laboratories.
- Applied research, pilot programmes, field validation and documentation.
- Solar-supported monitoring in remote or underserved locations.

Every public-sector engagement is subject to a documented scope, procurement requirements, technical assessment, data-protection obligations, applicable regulations and formal agreement. Government logos or endorsements should only be published with written authorisation.

## 6 Strategic investment and partnership

SYLUTION is open to conversations with investors and strategic partners who understand applied technology, agriculture, manufacturing, infrastructure, education and emerging-market innovation.

Potential areas for strategic capital or support include:

- Product and system development.
- Sensors, electronics, embedded hardware and software infrastructure.
- Field testing, validation and technical documentation.
- Training capacity, engineering workspace and testing equipment.
- Quality systems, operational readiness and carefully selected deployments.
- Research, market development and responsible scaling.

**Important notice**

This profile is an invitation to discuss strategic collaboration. It is not a public offer, investment recommendation or guarantee of financial return. Any investment, grant, procurement or partnership arrangement is subject to due diligence, formal documentation and applicable law.

**7 Engineering process**

|    |          |                                                                                |
|----|----------|--------------------------------------------------------------------------------|
| ,  |          |                                                                                |
| ,  |          |                                                                                |
| 01 | Discover | Clarify the challenge, users, site constraints and expected outcome.           |
| 02 | Design   | Define architecture, components, data flow, risks and success criteria.        |
| 03 | Build    | Develop hardware, sensors, firmware, software interfaces and documentation.    |
| 04 | Test     | Evaluate in controlled and field conditions and record limitations.            |
| 05 | Validate | Compare results with agreed acceptance criteria and document readiness.        |
| 06 | Deploy   | Install only the validated scope with training, support and ownership defined. |

**8 Responsible technology and evidence**

SYLUTION is committed to clear project status, practical testing, responsible use of data and honest communication about system limitations.

For projects involving sensors, cameras, personal information, agricultural data or institutional data, the scope should define who owns the data, who can access it, how it is protected, how long it is retained, and how it can be deleted or exported.

The company should also communicate that AI outputs are decision-support tools and should be reviewed by qualified people where operational, financial, safety or public-service decisions are involved.

**Publish only verified facts**

Numbers, partnerships, awards, deployments and impact figures require documentary support.

**Protect project data**

**Label development stage**

Distinguish active projects, testing, under development, planned features and commercial offerings.

**Keep human oversight**

Define access, retention, ownership, security and deletion responsibilities.

AI and automation should support responsible decisions, not obscure accountability.

## 9 Contact and next conversation

Investors, government agencies, NGOs, universities, banks, agricultural organisations and enterprises are invited to contact SYLUTION to discuss a specific challenge, programme, partnership or investment interest.
