

SYLUTION

Company Profile 2026

INTERNET OF THINGS · ARTIFICIAL INTELLIGENCE · ELECTRONICS

Intelligent connected technology, engineered in Africa

SYLUTION is an Internet of Things, Artificial Intelligence, Electronics and Technology Innovation company based at the Technology Incubation Centre in Kano, Nigeria, serving 15 industries across Africa.

Technology Incubation Centre (TIC), Form Center, Kano State, Nigeria

Who we are

SYLUTION designs, manufactures and deploys connected hardware and intelligent software from its Innovation Centre in Kano. We engineer the full stack ourselves: sensors and circuit boards, firmware, radio networks, cloud platforms, dashboards and the machine learning models that turn telemetry into decisions.

Our systems are built for the realities of African operations: dust, heat, unstable power and weak networks. Every deployment is measured on uptime, cost, energy and outcome.

Vision

To become Africa's leading engineering house for intelligent connected technology.

Mission

To build reliable IoT, AI and electronics systems that raise productivity, reduce waste and create technical jobs across the continent.

First deployment

Internet of Things at the core

IoT is not one of our services, it is the heart of the company. Everything else, artificial intelligence, electronics, robotics and software, exists to make connected systems more capable.

Sensing

Rugged nodes for soil, climate, water, energy, motion and machine state.

Connectivity

LoRaWAN, NB-IoT, GSM and Wi-Fi engineered for weak coverage areas.

Edge computing

Local control in milliseconds, fully functional when the network drops.

Cloud platform

Device management, storage, APIs and secure over the air updates.

Dashboards

Real time monitoring, alerting and reporting on any device.

Security

Encrypted transport, signed firmware and role based access control.

Where our IoT is deployed

- Smart cities: street lighting, waste, air quality and traffic sensing.
- Industrial IoT: machine monitoring, energy metering and predictive maintenance.
- Healthcare: cold chain monitoring and connected diagnostic devices.
- Energy: solar plants, battery banks and grid quality monitoring.
- Agriculture: irrigation control, greenhouse climate and livestock tracking.

Capabilities and industries

Engineering capabilities

- Internet of Things systems
- Artificial intelligence and machine learning
- Electronics and PCB engineering
- Embedded systems and firmware
- Robotics and mechatronics
- Industrial automation and control
- Drone technology and aerial data
- Renewable energy technology
- Software, web and mobile engineering
- Cloud platforms and data engineering
- Prototype development and manufacturing
- Technical training and capacity building

Industries served

Manufacturing

Energy and power

Oil and gas

Smart cities

Healthcare

Agriculture

Water utilities

Logistics

Mining

Education

Security

Retail

Construction

Telecommunications

Government

Research, products and academy

- Innovation Centre laboratories for electronics, IoT, robotics, AI and drones.
- In house product line of gateways, controllers, sensor nodes and dashboards.
- SYLUTION Academy: IoT, AI, electronics, programming and drone technology training.

CONTACT

Work with us

We work with investors, banks, governments, NGOs, international organisations, technology companies, universities, manufacturers, energy operators and agribusinesses.

How an engagement starts

- Discovery call to understand the site, process and objective.
- Technical assessment and system architecture proposal.
- Pilot deployment with measurable performance targets.
- Scale up, training, maintenance and long term support.
